

Puzzler #21

The letters on the chessboard below are arranged to disguise a list of names. The 64 jumbled letters actually spell the last names of eight famous World Chess Champions!

The key to finding the hidden names is to connect letters using KNIGHT MOVES. For example, the name Capablanca (one of the all-time greatest chess players!) begins on square c7. From that square, find the A an a8, the P on b6, the next A on a4 and so forth.

YOUR JOB: By connecting letters using knight moves, unravel the names of all 8 chess champions. Write in the names of the squares where you find each letter.

GENIUS CHALLENGE (Not required): Use each square only once AND move from the last letter of each name to the first letter of another name from the list! Accept this challenge only at your own risk. (Hints: After Capablanca, search for Spassky. Botvinnik appears fifth on this special *Knight's Tour* of the board.) Take note and proceed with caution when you come to forks in the road -- there are MANY decision points!
